CHOICE AND CRIMPING OF TERMINALS

Choice of The Connector

In order to obtain a connection that can be guaranteed for a long time it is necessary to select the connector suitable to the application field and strictly conformed to the section of the cable to be crimped (see the table below). In the large range of Hua Wei's products you will certainly find the ideal solution for every requirement.

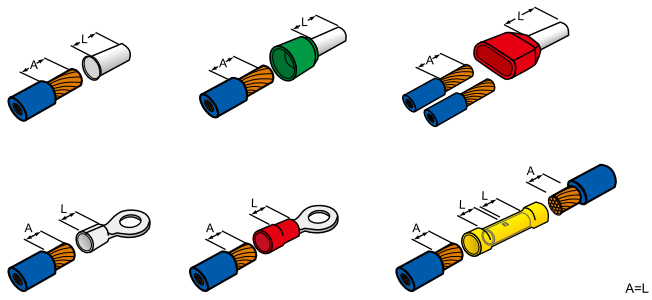
Stripping

Every crimping operation requires that the cable is first stripped without deforming the wires and for a length as indicated bellow:

Section (sq.mm)	Stripping Tolerance (± mm)
0.5-2.5	0.8
4.0-6.0	1.2
10-120	1.6
150-630	3.2

Assembling

Fit into the connector the cable with a round section for the complete length of the stripped area. Verifiy that there are not wires out of the connector. If you need to use sectorals cables you must arrange a previous rounded crimping operation of the cable as follow:



Using The Crimping Tool to Crimp The Terminals

Make the crimping operation shown as the drawing bellow:
